

### WHAT IS ISO 28000:2007 Standard?

ISO 28000:2007 is a management system standard which has been developed specifically for logistics companies and organisations that manage supply chain operations. Published as a Publicly Available Specification by the International Standards Organisation in 2005, this was replaced in 2007 by the full standard, ISO 28000:2007.

ISO 28000:2007 is a management system specification for the protection of people, property, information and infrastructure; in companies and organisations participating in local, national and international supply chain operations.

ISO 28000:2007 is suitable for all sizes and types of organisations that are involved in the production of goods, manufacturing, services, storage or transportation at any stage of the products' development or movement in the supply chain.

Supply chain security is an essential requirement for companies involved in the international supply chain, especially those having to comply with stronger security demands from Customs and/or their business partners.

For organisations working within, or relying on, the logistics industry, certification to the ISO 28000:2007 supply chain management standard provides a valuable framework. It will help minimise the risk of security incidents and so help provide problem-free 'just in time' delivery of goods and supplies.

Providing ISO 28000 consulting, Training and Certification facilitation services across the world

### ISO 28000:2007 Model

### • Who would benefit from ISO 28000?

Companies that wish to implement and maintain a proven supply chain security management system; any type and size of organization involved in manufacturing, services, storage and transportation related to the production or supply chains.

### • How are ISO 28000 and ISO 9001/14001 linked?

ISO 28000 was designed to help integrate quality environmental and supply chain security management systems within an organization. It is compatible with ISO 9001 (quality management) and ISO 14001 (environmental management). ISO 28000 is based on a plan-do-check-act management system modelled after the proven ISO 14001 framework. The risk-based approach outlined in ISO 14001 is similar to the one used in ISO 28000. ISO 28000 is a risk based approach, aligned to ISO 14001 and it builds on the foundation of ISO

9001 and ISO 14001 management systems
